

Replacement Cabinet Door and How to Adjust Hinges

Installation on Vanity, Dresser, Linen , Counter Wall Cabinets or Toilet Topper

TOOLS AND SUPPLIES NEEDED

- Phillips Screwdriver

To Remove a Cabinet Door:

Remove the middle screw holding the hinge to the face frame of cabinet on both hinges. Place the new door with the hinge mounting plate over the holes and replace the screws for both hinges.

To Adjust a Cabinet Door (In/Out):

To adjust the door closer to face of cabinet turn the back screw clock wise. To adjust the door out from the face turn the screw counter clock wise.

To Adjust a Cabinet Door from Left to Right or Right to Left:

To adjust the door closer to center of cabinet turn the front screw clock wise. To adjust the door out from the center of the cabinet turn the screw counter clock wise.

To Adjust a Cabinet Door Up or Down:

To adjust the door up, loosen the center screw on both hinges but **DO NOT** remove, move the door to the desired position and retighten this screw on both hinges. To adjust the door down, loosen the center screw on both hinges but **DO NOT** remove, move the door to the desired position and retighten this screw on both hinges.
